

Carriage of small and large CO2 cartridges

As stated in the manual: the carriage of small gas cartridges containing carbon dioxide (CO2) gas are permitted for carriage in either checked or carry-on baggage. The following criteria apply to the carriage of these items:

- No more than four per person;
- Cartridge capacity **MUST NOT** exceed 28gm (50ml) each;
- Cartridges must be in good condition;
- Cartridges must be packed or packaged to prevent contact or damage.

Last year a number of passengers had CO2 cartridges weighing 33 gms... we need to clear these for flying... it takes time to obtain clearance... please arrive at the airport early and if they have time and the facilities, they are encouraged to contact dg@qantas.com.au for further information prior to arriving at the airport.
